

GROUNDHOG

FMS for Autonomous Haulage Systems (AHS)

Transform Your Autonomous Mining Fleet with GroundHog's Advanced FMS

TRAVELLING

Track the truck's location and ETA to the loading zone

LOADING

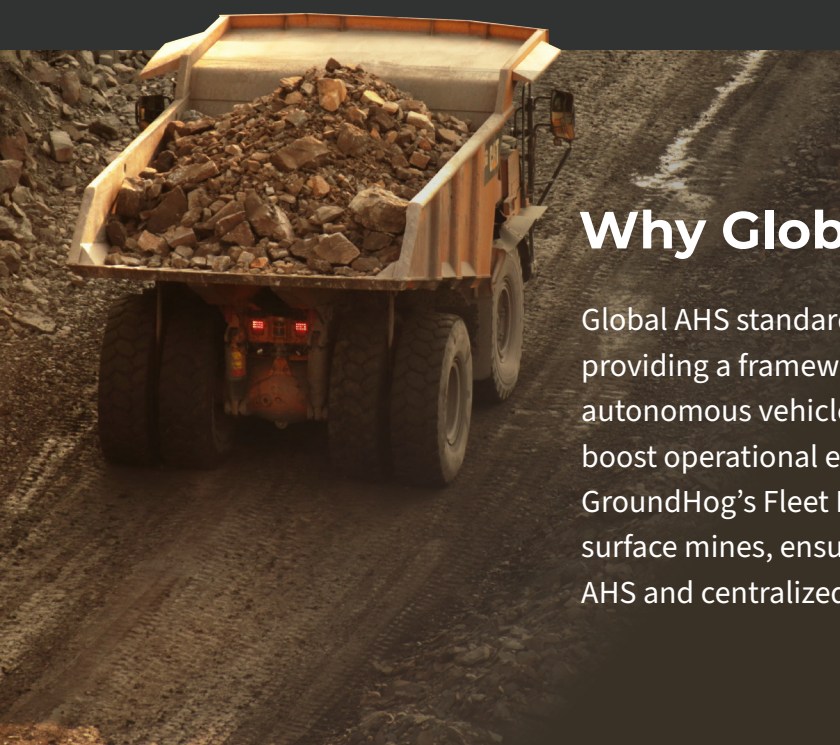

Monitor loading progress so the right payload is achieved

DUMPING

Get live updates when the truck reaches the dump site

Why Global AHS Standards Matter

Global AHS standards are pivotal for advancing mining technology, providing a framework for seamless data exchange between autonomous vehicles and fleet management systems. These standards boost operational efficiency and drive innovation in mining operations. GroundHog's Fleet Management System (FMS) utilizes ISO 23725 for surface mines, ensuring smooth and effective data exchange between AHS and centralized control systems.

Real-Time Vehicle Monitoring

GroundHog FMS offers a real-time view of each vehicle's journey, including state, location, speed, and status. This visibility helps fleet managers make quick, informed decisions.

Automated Real-Time Updates

Real-time updates in the status bar eliminate manual data extraction. Fleet managers can quickly assess operations and respond instantly, improving efficiency and decisions.

Event-Based Tracking, Analysis, & Consolidated Data

Track key events—spotting, loading, hauling, dumping—while consolidating metrics like trips, material moved, and performance. This helps optimize workflows and boost productivity.

User-Friendly Interface

The system has a simple & intuitive interface that lets fleet managers easily access key info like performance metrics and route data, streamlining fleet management.
