

About Us

Unified Platform for Mine Digitization
Built for Operations, Maintenance, Quality
Control, Training Management, Safety and
Compliance.

Our Story

We believe that inexpensive Android and iPads, BLE and WiFi networks, AI, and an explosion of off-the-shelf products in telemetry systems **has made it easier for mines** of all types and sizes to gather data in ways not possible before. But that data continues to live in silos and is still analysed and reported in spreadsheets. We want to change that.

Open-Pit Mine Digitization Solution

SCAN ME

Precision and Efficiency in Every Mining Activity

- ✓ **2cm Precision:**
Guide drilling and digging machines with pinpoint accuracy.
- ✓ **Telemetry Tracking:**
Monitor tonnage, engine hours, fuel, and more in real-time.
- ✓ **Manual Data Capture:**
Seamlessly integrate data from drilling, blasting, digging, loading, and hauling.
- ✓ **Material Accountability:**
Maintain detailed records of material movement.
- ✓ **Operational Optimization:**
Use cycle time data for bottleneck analysis and efficiency improvements.

Key Features

High-Precision Drilling

Telemetry Data Integration

Automated Trip Counting

Dynamic Dispatch

High-Precision Digging

Autonomous Haulage System

ROM Loader Tracking

Haul Truck Tracking

Cycle Time Tracking

Rosters & Attendance

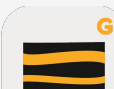

Route Optimization Based on GPS

User-Friendly Apps

Open-Pit Apps
